

fuel injector clogged

05/05/2022

Low-quality petrol causes formation of engine gum deposits on fuel injectors and within the injector rail thus hindering proper fuel feeding and impairing quality of its atomisation.

BIZOL Gasoline System Clean+ g80

A fuel additive to clean valves, combustion chamber and fuel injectors (atomising nozzles)

- remedies irregular idle running and bad engine starting
- is especially advisable for stop and go driving mode in city traffic
- provides long term protection against deposits and corrosion
- optimises fuel feed and improves its atomisation
- increases engine power and reduces fuel consumption
- is recommended after every 2.000 km, especially for low-quality fuel
